

Data Sheet

# Enjoy ServiceNow, not later.

AutomatePro is the DevOps and automated testing solution that's here to speed up your software delivery life-cycle.

Official partner of  
**servicenow.**

 **AutomatePro**  
Let's make progress

# Reduce Costs, Save Time

Reduce your costs with AutomatePro, a patented DevOps and Automated Testing solution for ServiceNow®. AutomatePro will immediately improve your efficiency when implementing upgrades and updates to ServiceNow.

It does this through a “write-once, use-many” method. This allows you to define your business processes during the requirements capture stage of the SDLC and then re-use

them for the entire design, development, testing and documentation phases of the project. For example, Design and Acceptance documents and User Guides can now be produced automatically at the touch of a button.

With AutomatePro, regression testing ServiceNow upgrades can now be done with just one click.

# Automated Planning

Quickly capture requirements in the form of User Stories in a structured form. These become your automated test scenarios with no additional effort required.

Automatically produce Requirements and Acceptance documents as Knowledge Articles or as PDFs for sign-off by process owners.

# Why AutomatePro?

AutomatePro is so much more than just an automated testing tool. It is a collaborative development environment that automates and speeds up every stage of the software delivery life-cycle, from requirements and design specifications through to implementation. Reduce your costs and exposure to change risk. By increasing your control of multi-stream development it will improve quality. It even automatically produces release notes and a fully updated user guide.

## In brief

- Low-Code / No-Code Solution
- Fully Automated UI Testing
- Test Service Portal, Service Catalog, Email Notifications, Business Rules
- Extend your test coverage beyond ServiceNow, without writing Selenium code
- Supports Test Driven Development

# Automated Development

- Automatically create development tasks from new requirements
  - Automatic creation of defects from automated test execution
  - Immediately alert developers to defects
- Manage developer tasks against user stories and test-driven requirements definitions

by enabling regression tests or smoke tests to be run in Continuous Integration Testing (CIT)

# Automated Documentation

- Produce up-to-date User Guides, Training Guides and Process Documents (with screenshots of every step) automatically, all at the press of a button
- Reduce the time taken to produce these documents from days to minutes
- Automatically produce upgrade comparison reports for risk-free upgrades

**“With its no-code interface, AutomatePro allows business users to define and execute tests, without requiring any technical knowledge. It is designed specifically to reduce your business costs and time involved in implementing upgrades and new releases in ServiceNow.”**

**Paul Chorley**  
CEO AutomatePro Ltd

**“Instead of taking 10 people to test the system it now takes one... just to trigger the tests.”**
